Full Stack Developer

Innovative and performance-driven Java Full Stack Developer with 4 years of extensive experience in designing, developing, and deploying scalable, cloud-native enterprise applications using Java, Spring Boot, Microservices, and Angular. Specialized in modernizing legacy systems, implementing micro frontends, and building secure RESTful APIs. Adept at leveraging AWS Cloud services, Agile methodologies, and DevOps practices to deliver high-quality, customer-centric solutions with optimized performance and seamless user experiences. Proven ability to collaborate with cross-functional teams, drive technical excellence, and deliver business value through continuous innovation.

Highly skilled and result-oriented *Java Full Stack Developer* with 4 years of professional experience in designing, developing, and deploying scalable enterprise applications using cutting-edge technologies. Expertise in building Cloud-Native, Microservices-based solutions and modern web applications with Spring Boot and Angular.

Proficient in developing end-to-end solutions with a strong understanding of Microservices Architecture, RESTful API development, UI/UX best practices, and Cloud Integrations (AWS). Hands-on experience in modernizing legacy applications, POS systems, and building enterprise portals with a focus on performance, security, and scalability.

Strong exposure to Agile & DevOps practices, with experience in CI/CD implementation using Azure DevOps and Jenkins. I am passionate about clean coding, TDD, API design, and modern frameworks. Collaborative team player with excellent problem-solving skills and a keen eye for emerging technologies.

Accomplishments

Key Accomplishments:

- Successfully modernized legacy POS System into a Micro-services & Micro Front-end-based architecture, reducing technical debt by 60% and improving scalability.
- Designed and implemented an AWS Certification Tracking Application, enabling 1000+ users to manage AWS credentials with automated expiry alerts and renewal tracking.
- Built reusable Angular components library across multiple projects, reducing UI development efforts by 40%.
- Spearheaded API standardization initiative across services improving API re-usability & reducing integration issues by 35%.
- Actively contributed to Agile ceremonies and DevOps practices, leading to faster release cycles (bi-weekly deployments).
- Integrated AWS Cloud services like S3, RDS, SES, and Lambda to deliver cloud-native functionalities with improved cost efficiency.
- Awarded "*Star Performer*" and recognized multiple times for delivering critical modules ahead of deadlines.

Career Experience

Full Stack Developer at Capgemini, Hyderabad

December 2021 — May 2026

PROJECT 1: AWS Certification Tracking Application

Domain: Cloud Solutions | Role: Full Stack Developer

Description:

An enterprise-grade AWS Certification Tracking platform to help organizations & employees manage their AWS certifications effectively. The system ensures proactive reminders, expiry tracking, compliance reports, and dashboard analytics.

Responsibilities:

- Developed Microservices using Spring Boot for tracking certification lifecycle.
- Designed intuitive dashboards in Angular with visual analytics using Chart.js.
- Implemented Micro Frontend architecture for independent module deployment.
- Integrated AWS services like S3 (Document Storage), RDS (Database), SES (Email Notifications).
- Developed RESTful APIs and integrated them with Angular frontend.
- Role-based authentication and authorization using Spring Security & JWT.
- Integrated Azure DevOps CI/CD pipelines for automated deployment.
- Wrote Unit and Integration Tests for backend using JUnit 5 & Mockito.
- Applied Agile practices with 2-week sprints, daily stand-ups, and code reviews.

Impact:

- Automated Certification Tracking reduced manual tracking efforts by 80%.
- Increased AWS Certification compliance across the organization.
- Provided real-time dashboards for leadership insights.

PROJECT 2: Employee Self Service Portal (ESS Portal)

Domain: Retail | Role: Full Stack Developer

Description:

Developed an Employee Self Service Portal for automating HR processes like Leave Management, Attendance Tracking, Pay slip Generation, and Profile Management.

Responsibilities:

- Developed RESTful Microservices using Spring Boot 3.x.
- Created Angular 16-based modular components for ESS functionalities.
- Integrated AWS SES for notification emails and S3 for document uploads.
- Used Spring Security with OAuth2 for secure user access.
- Created dynamic reports using Jasper Reports and Chart.js.
- Integrated Jenkins pipelines for Automated Build and Deployment.
- Wrote Unit Test cases using JUnit 5 & Jest.

PROJECT 3: GE (Field Assignment Manager (FAM))

Role: Angular Developer

Description:

FAM is an enterprise-grade, real-time field operations management system for GE Grid Solutions that streamlines the creation, tracking, and management of field assignments for damage assessments, surveys, and inspections across electrical grid infrastructure.

Responsibilities:

- Developed and maintained a full-stack enterprise application using Angular 20 frontend with NestJS 11 backend in an Nx monorepo architecture.
- implemented RESTful APIs and WebSocket connections for real-time data synchronization across field teams.
- Integrated with GE Grid Solutions' internal APIs and services including GX UI libraries (v9.6.0) for consistent enterprise UX
- Built complex Angular components using modern features including signals, reactive forms, and standalone components with On Push change detection strategy.
- Implemented advanced form validation with custom validators for assignment creation workflows.
- Created interactive map visualizations using OpenLayers 9.2 and GX Network Viewer for displaying electrical grid infrastructure (feeders, substations).

Impact:

- **Reduced Response Time:** Streamlined assignment creation and field dispatch process for electrical grid maintenance and emergency response, reducing average response time for damage assessments and emergency repairs Reduced operational downtime due to quicker access to service history and documentation.
- **Real-Time Coordination:** WebSocket-based real-time updates enable instant communication between office coordinators and field workers, eliminating delays in assignment status tracking

Education

B Tech, July 2016 — November 2020
CMRIT, Hyderabad

Areas of Expertise

- HTML & CSS
- Java
- Spring Boot 3.x
- PostgreSQL
- JWT
- Azure DevOps (CI/CD)
- Mockito
- API Documentation (Swagger/Open API)
- SQL
- JavaScript
- Microservices Architecture
- MongoDB
- OAuth2
- Jenkins
- Jest
- Responsive Web Design & Performance Optimization
- Git
- Angular
- REST API Design & Integration
- Spring Security
- Docker
- Argo CD
